

# Network Domain Consolidation and Component Retirement

**Challenge:** Transition users, files and devices from existing domain to consolidate networks across large academic health care organization.

## Success Factors

**Best Practice | Knowledge | Experience.** Utilizing hands-on analytical skills and project management expertise, the Ballista consultant developed a phased approach to consolidate networks improving IT operations; user experiences; and security and compliance while realizing a significant cost savings across the organization.

### Approach

Developed phased project schedule across **14** entities to maximize resource utilization. Led creatively through complex external influences (i.e. EHR upgrades). Excelled collaboratively & transparently.

### Outcomes

Applications successfully migrated from legacy domain servers with **43** retired from consolidation. Cost reductions & efficiency gained by standardizing support, licenses & hardware assets.

**942 users** transferred to existing Active Directory single sign-on domain

**4.9 million files** migrated successfully to new network file share

**1800 devices** transitioned to new default network
